### 380 KV, 'WIEN SÜDOST - GYÖR', INSTALLATION OF 2ND SYSTEM

Customer: APG

Project Start: 09/2009

Contract Value: € 1,2 million

Project End: 02/2011

---

The power line 'Wien Südost - Györ' is one of the most important and critical 380-kV lines in Austria.

The key target was to add a second system to the existing line by adding a vertical twin-conductor bundle.

VLB Leitungsbau was awarded with the contract to expand the existing system to strengthen the network. Additionally, this expansion ensures national as well as international power supplies.

The existing system remained fully operational throughout all installation works. VLB Leitungsbau was responsible for all installation works which were realised by a staff of approximately 30 employees.

### The work carried out by VLB Leitungsbau for this project includes the following:

Installation of 162 km of cable

Installation of 489 tension string sets and chains for suspension poles

Erection of 4,200 m<sup>2</sup> of insulated scaffolding for crossings
